Re: *Ex Parte* Presentation  
*In the Matter of* Wireless E911 Location Accuracy Requirements  
PS Docket No. 07-114, E911 Requirements for IP-Enabled Service  
Providers, WC Docket No. 05-196

Dear Ms. Dortch:

Today, on behalf of TruePosition, Inc., Michael Amarosa, Dennis Fitzgibbons and I had separate meetings with Ms. Angela Giancarlo, Chief of Staff to Commissioner McDowell and Ms. Amy Levine, Special Counsel to Chairman Genachowski. We discussed the path to more accurate and pervasive location wireless location ability, particularly in the emerging broadband environment. We related TruePosition's concern regarding the international standard setting process addressing broadband Long Term Evolution (LTE). We reiterated our position that that the process has selected only a subset of location technologies.

We reviewed the location technologies selected by LTE, Enhanced Observed Time Difference (E-OTD), and its successor Observed Time Difference of Arrival (O-TDOA) and Assisted Global Positioning System (A-GPS). We urged the Commission's scrutiny of how broadband technologies can best deliver improved location information. We concluded by relating that as LTE systems pursue the US market, it is vital that the Commission's technical neutrality policies be observed so that modern technologies can provide meaningful assistance to emergency response in locating the individual needing help.

Respectfully submitted,

Copy to:  
Ms. Giancarlo  
Ms. Levine
